Steps we followed for research work(publishing/simulation/implementation)

1. Collecting reference papers(literature) on particular domain
2. Reading and understanding base papers
3. Coming with new ideas for improvements
4. Analyzing for implementation / for simulation (what to do, what are the inputs, what are the expected outputs, parameters to monitor etc.)
5. **Selecting the appropriate tool/language** and designing the whole system based on how to do it.
6. Implementing the system
7. Results
8. Writing new paper with new proposal with results
9. Publishing on magazines
